

# Geometric Visualization of the $3n + 5$ Problem: *Voronoi Tessellation and Six Stable Basins of Attraction in Binary Logarithmic Spiral Space*

Hiroshi Harada — May 15, 2026

**Figure 1.** Voronoi tessellation of  $3n + 5$  orbits in binary logarithmic spiral space. Orbits converging to the 1, 5, 19, 23, 187, or 347 periodic orbits tile the entire space as six distinct color basins.
